SAMIYA PATHAN

Data & Software Engineering | Solapur, Maharashtra
+91-7972722399 | samiyapathan0212@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Computer Science Engineering student (B.Tech, CGPA 9.35/10) building across data analytics and software engineering. Hands-on with Python, SQL, and Power BI for EDA, forecasting, and KPI dashboards, and with Java, Spring Boot, React, and Node.js for full-stack applications. Completed data analytics internship projects and built applications with live demos. Targeting Data Analyst, Business Analyst, entry-level Data Engineering, Software Engineer, and Full-Stack roles.

TECHNICAL SKILLS

Programming: Python, SQL, Java
Analytics: Pandas, NumPy, scikit-learn, Excel, Power BI, DAX, Tableau, Data Visualization, EDA, Matplotlib, Seaborn
Development: Spring Boot, React, TypeScript, Node.js, Express, REST APIs, Streamlit
Databases: MySQL, PostgreSQL, MongoDB (Atlas), Redis
Tools: Git, GitHub, Jupyter Notebook, Maven, Docker, Render

INTERNSHIP EXPERIENCE

Data Analytics Intern — Labmentix Pvt. Ltd.

- Owned three end-to-end analytics projects (fitness, music/media, gaming), from raw data cleaning to Power BI dashboards and SQL-driven insights.
- **Fitness Tracker:** resolved multi-granularity join duplicates across daily, hourly, and minute tables (940 records, 33 users); found ~83% of tracked time is sedentary and a recurring Tuesday step-count dip.
- **iTunes Music Store:** indexed customer_id, track_id, and genre_id on an 8-table schema based on join frequency; flagged 6-month inactive customers and zero-invoice tracks; found Rock drives the highest invoice volume.
- **Video Game Market:** standardised inconsistent release dates with STR_TO_DATE() across 1,329 games; identified wishlist count as a 229x demand-to-revenue leading indicator (11M plays, 796K wishlists; NA 49.7%, EU 29.7%, Japan 10.9% of sales).

Data Analysis Intern — Cognifyz Technologies

- Analyzed 9,551 restaurant records (21 original columns) using Python, Pandas, NumPy, Matplotlib, Seaborn, SciPy, and Folium in Jupyter Notebook.
- Completed 11 tasks across three levels and produced 16 visualizations covering cuisines, ratings, price categories, geographic patterns, restaurant votes, and service availability.

Data Science & Analytics Intern — Zidio Development

- Built FORESIGHT, an end-to-end demand forecasting and inventory analytics application in Python, Pandas, and scikit-learn, taking raw sales and stock data through validation and EDA to a Streamlit dashboard.
- Evaluated forecasts with rolling-origin backtesting: the six-week Seasonal-Naive baseline achieved 11.80% WAPE versus 15.20% for HistGradientBoosting, so the baseline performed better and was kept as the production forecast.

Full-Stack Developer Intern — AI Tech Gen Technologies

- Developed Internship-Job-Portal, a full-stack web application using React, Vite, Node.js, Express, and MongoDB (Mongoose) to store and serve opportunities and applications through a REST API.
- Implemented opportunity listings with keyword search and domain filtering and a validated application workflow; deployed the frontend and backend on Render with a MongoDB Atlas database.

SELECTED PROJECTS

FORESIGHT — Demand & Inventory Intelligence Live Demo | GitHub

Python, Pandas, scikit-learn, Streamlit

- Forecasted weekly SKU-level demand over a 6-week horizon from 36,550 daily sales records across 50 SKUs, validated on 8 rolling-origin backtest windows with time-based splits to avoid leakage.
- Added a rule-based risk engine that flags stockout and overstock per SKU with rupee exposure and priority ranking, surfaced in an interactive Streamlit dashboard.

ShopSphere — Full-Stack E-Commerce Platform Live Demo | GitHub

Java, Spring Boot, React, TypeScript, PostgreSQL, Redis, Maven, Docker

- Built a customer flow with cart, wishlist, sandbox checkout, order history, tracking, and cancellation, plus admin order-status management; the storefront uses a demo catalogue and payments are simulated.
- Implemented JWT access tokens with rotating refresh tokens in HttpOnly cookies and role-based authorization (customer/admin) on a Spring Boot REST API.
- Used transactional checkout with pessimistic inventory locking, Flyway migrations, Redis caching, 111 backend tests, GitHub Actions CI, and Docker Compose; deployed on Render.

Internship-Job-Portal Live Demo | API | GitHub

React, JavaScript, Vite, Node.js, Express, MongoDB Atlas, Mongoose, Render

- Added an admin interface to create, edit, and delete listings and to review applications, with status tracking (pending, reviewed, accepted, rejected) and server-side pagination.
- Designed a responsive UI (mobile, tablet, desktop) with a persistent light/dark theme and form validation on application submissions.

Superstore Sales Analytics Dashboard

Power BI, DAX

- Analyzed 9,994 retail records and found the highest-sales categories were not the most profitable; built DAX drill-through pages for category and region analysis.

HR Attrition Dashboard

Power BI

- Segmented attrition by overtime, age, income, and tenure and found overtime the strongest cross-cutting predictor; built drill-down slicers for self-serve filtering.

Customer Shopping Behaviour Analysis

SQL

- Used CTEs and window functions to isolate revenue trends by customer segment; found heavy discounts on low-subscription customers produced the weakest ROI.

EDUCATION

B.Tech — Computer Science Engineering **CGPA: 9.35 / 10**

Walchand Institute of Technology, Solapur

CERTIFICATIONS

- Python for Data Analysis — Great Learning
- SQL (Basic) — HackerRank
- Power BI for Beginners — Microsoft / Simplilearn
- MS Excel — Microsoft / Simplilearn
- AI Internship — Acmegrade (2025)
